

Our patented technology uses special sensors to consistently monitor any foundation below the ground. With this data, we give you simple diagnostic analysis in real time with industry leading accuracy and insight. We catch issues early - before they become costly!

Slabsure is an hourly foundation monitoring system

The Slabsure system can wrap around virtually any home or commercial property

Our sensors remain out of sight, below the soil level

Sensors are easily anchored to the foundation every 10' and move up and down with the foundation

A cellular computer sends data to our cloud computer

Foundations are monitored constantly and provide important status updates on-demand

Our convenient app allows you to stay up-to-date.
